

"Definitely keep on developing!"

AUCOTEC Board on ELCAD/AUCOPLAN

AUCOTEC's business figures bear witness to a transformation: more than 80% growth in recent years. Most of this growth is due to the database-driven cooperation platform Engineering Base. The attention that the market has paid to this development has also caused confusion with regard to the updating of AUCOTEC classics such as ELCAD/AUCOPLAN or RUPLAN. Read here what AUCOTEC itself has to say about this:

Horst Beran, CEO: "Our position is very clear: many customers are still very satisfied with our classics, they will not have to get used to something new in the foreseeable future because one thing is and remains AUCOTEC's maxim: our customers can rely on their investments being future-proof. For 33 years, our systems have always had unlimited upward compatibility. No other provider gives such a safeguard for your work: with data availability for decades!"

Uwe Vogt, Executive Officer: "Our principle is to let customers decide whether and when they see added value in a changeover. The ELCAD/AUCOPLAN product family enjoys a high level of acceptance in the market so our planning also takes into account the provision of the personnel and know-how necessary for further developments in the future."

Dr. Lex Bedijs, Chairman of the Supervisory Board and developer: "We will continue to further develop the classics. This involves both new functions and modernizations for even more convenient operability, a clearer visual appearance and adaptation to future operating systems."
